

SHEIKH NAIM

Mobile & Full-Stack Developer | Toronto, ON | Open to on-site, hybrid, and remote
naimbgd@gmail.com | linkedin.com/in/snaimio | snaimio.github.io | github.com/snaimio

PROFESSIONAL SUMMARY

Developer shipping native applications across iOS (Swift/SwiftUI) and Android (Kotlin), backed by custom PHP 8 / MySQL REST APIs. Experienced owning features end-to-end, from Figma wireframes to relational data models, with a focus on privacy-first local architecture and audit-safe data handling. Seeking software engineering internships, co-op placements, and junior developer roles.

TECHNICAL SKILLS

iOS: Swift, SwiftUI, SwiftData, WidgetKit, Swift Charts, UserNotifications

Android: Kotlin, Jetpack, Room, Retrofit, Media3 ExoPlayer, WorkManager, Material Design 3

Web & Back-End: PHP 8, MySQL, REST API Design, Session Auth, RBAC, JavaScript, React, Angular, HTML5, CSS3, Firebase (Auth/Firestore)

Architecture & Design: MVVM, Relational Data Modelling, Figma, Responsive Design

Tools: Git, GitHub, Linux CLI, Xcode, Android Studio, Postman

FEATURED PROJECTS

Spendora — Privacy-First iOS Subscription Tracker (Mobile Capstone)

2026

Swift 6 | SwiftUI | SwiftData | WidgetKit | Swift Charts | github.com/snaimio/Spendora

- Built a 100% on-device subscription tracker with no third-party services, using transactional SwiftData persistence and category filtering.
- Scheduled automated renewal reminders with calendar-triggered local notifications.
- Shared data across Home and Lock Screen widgets via App Groups; added Swift Charts spending analytics and PDF/CSV report export.

Maple — Family Chore & Rewards Platform (Full-Stack Capstone, in progress)

2026 – Present

PHP 8 | MySQL | REST API | RBAC | PHP Sessions | Angular | github.com/snaimio/maple

- Architected a modular PHP 8 REST API with 25+ endpoints, session-based authentication, and role-based access control (Admin, Parent, Child).
- Designed an append-only points ledger that derives balances from immutable transactions, preventing race conditions during reward redemptions.
- Modelled households, per-household roles, chores, and rewards in a relational MySQL schema; building the Angular frontend against the API.

Sensor Toolbox — Native Android Sensor & Navigation Suite

Aug 2026

Kotlin | Google Play Services | osmdroid | Material Design 3 | github.com/snaimio/sensor-toolbox

- Built 16+ real-time utility tools on low-level hardware sensors (accelerometer, gyroscope, magnetometer), including a tilt-compensated compass and GPS speedometer.
- Implemented OpenStreetMap turn-by-turn navigation with osmdroid and Haversine distance calculations for accurate offline trail tracking.

SuperPodcast — Native Android Podcast Streaming App

Sep – Oct 2026

Kotlin | Retrofit | Room | Media3 ExoPlayer | WorkManager | github.com/snaimio/superpodcast

- Built a streaming app on the iTunes Search API, with Room caching podcast metadata offline and powering a local playback queue.
- Integrated Media3 ExoPlayer with foreground notification controls and WorkManager for automated background episode sync.

EDUCATION

Diploma, Mobile Web Developer Using AI — triOS College, Toronto, ON

Expected May 2027

Coursework: Native iOS (Swift, SwiftUI, SwiftData), Native Android (Kotlin, Jetpack, Room), Full-Stack Web (JavaScript, PHP 8, MySQL, Angular, React), Linux CLI, REST Architecture, AI API Integration.
